ProComp connects!

**ProComp connects JobRouter®
and SAP® and enables
continuous processes.**

ProComp

Our SAP®-modules enables continuous business processes with SAP®

Digitize your company by creating efficient and consistent processes. Transfer and post data directly into or from SAP® and start the subsequent process in JobRouter® without media disruptions. **With the modules of ProComp this ist quite simple!** Provide all the information where they are needed.

Use the potential of your SAP®-system – we will show you how!

File management

Store merchandise management, human resources, maintenance or any other documents in JobRouter® or SAP®. Create effiecient customer-, supplier-, purchasing-, material-, contract- or personnel-records and link them with SAP®. Make your individual SAP® documents or the complete record searchable, for e.g. the JobRouter® personnel file in SAP® HCM or the customer record in SAP® customer management system.

Digital processes

Whether purchasing, sales, technique or administration – processes in all those departments can be optimized. Control and supplement master and transaction data from SAP®. Start for example the release workflow in JobRouter® after creating an offer or an order in SAP® or post data directly in SAP® at the end of a workflow.

Incoming invoice workflows

Inbox and approval by workflow. Capture and post your invoices directly in SAP® via JobSAP BAPI. Add master and transaction data from SAP® to your workflow (e.g. accounts, cost centers, etc.) or search live in SAP® for current data on orders or supplier master data.

Applicant and personnel management

Digitization of the processes in the applicant and personnel management. Create efficient personnel files, digitize remuneration statements or integrate employees in your file through employee self-service.

Respond live to relevant changes in personnel data in SAP® and adjust automatically the employee file in JobRouter®. Digitize your settings and exhibitions, travel expense reports and

Process consulting

Optimize and digitize your processes or the processes of your customers. ProComp advises and supports you in all aspects of SAP®. Often a short integration in the concept phase is sufficient, that you can digitize your business

processes permanently and optimal. We'll also gladly support you with the development of interfaces and logics in SAP® or the configuration of your Archivelink interface.

DataChangeManagement for SAP®

Robot and automation processes

DataChangeManagement for SAP®

Whether an employee which changes the department or a new order in SAP® is generated. In SAP® master and transaction data are frequently modified or documents are posted. Respond promptly to these events and

start automatically the right processes or required follow-up activities. Provide live information from SAP® to your process.

Robot and automation processes

Should sub-processes be automated? No problem! Map the processes with JobRouter® and automate step by step the individual steps. You can use defined JobSAP BAPI interfaces

or remotely control the processing in SAP®. Record work sequences in SAP®, prepare them with the data from your own JobRouter® database and automate your subprocesses.

Product description of the modules

JobSAPArchive Link SAP®: The JobRouter® module stores outgoing documents from SAP® via the ArchiveLink interface in JobArchive and enables the display via ArchiveLink from the SAP® booking.

JobSAP BAPI: The JobRouter® module calls defined transfer functions in SAP® up, e.g. parking or posting an invoice, removing payment blocks, etc.

TableSync: Provides important table master data from SAP® such as SAP® master data from suppliers, customers, employees, materials, accounts, cost centers, etc. in your JobRouter® database for your processes.

LiveSearch: Complete your processes with live infromation from SAP®. Search in current transaction data, check orders, incoming goods or payments, calculate a payment proposal for your logistical incoming invoices, etc.

Indexer: Index documents in the JobArchive with reference to SAP® business objects. Save data entry per document and retrieve relevant data from the SAP® business objectst as a search term for each document. Create efficient customer, supplier, employee or material records.

DCM: ProComp Data Change-Management (DCM) for SAP® registers and buffers in SAP® changes in relevant master and transaction data, so nothing can get lost. In JobRouter® you can react flexibly and start your own processes. For example, you can update your personnel file or release documents entered in SAP® .

UserControl:
From SAP® master data or an SAP® booking an employee can:
- open a record (e.g. personnel file from SAP® -HCM or the relevant customer file from quotation and order)
- manually start a process (e.g. query to the employee)
- display analysis via JobSelect (e.g. requested, taken and remaining leave of an employee, etc.)

Automate: Automatically executes defined transactions in SAP®. Record transactions in SAP®, connect them to database queries and digitize and automate daily bookings in SAP®. The processing can be execute directly or in batch according to your requirements.
